

SOORYA T

Data Scientist | Machine Learning & AI Engineer

sooryat101@gmail.com | +91 7736163478 | Ottapalam, Palakkad | [linkedin.com/in/sooryat101](https://www.linkedin.com/in/sooryat101) | github.com/Sooryasooru

SUMMARY

Data Scientist and Computer Engineer who builds and ships end-to-end **ML** and **AI** systems, from **data engineering** and modelling to **RAG-based LLM** applications, agentic systems, **data visualization**, and **cloud deployment**. Experienced across the modern **ML** stack and big-data tooling (**Python**, **SQL**, **PySpark**), with a focus on **healthcare AI**, **retrieval-augmented generation**, and production-style **full-stack** delivery. Recently led the design, build, and deployment of a six-service healthcare analytics platform with an automated **CI/CD** pipeline to a live cloud environment.

SKILLS

Python, SQL, PySpark - RAG / LangChain / LangGraph - FAISS / Chroma / Vector DBs
Scikit-learn, XGBoost - LLMs / Transformers - Embeddings / Sentence-Transformers
TensorFlow / PyTorch - NLP / Hugging Face - NumPy / Pandas
Big Data / PySpark - Statistics / EDA - Time-Series Forecasting
FastAPI / Flask - Data Visualization (Streamlit / Dash) - Docker / Compose / nginx
CI/CD (GitHub Actions) - AWS (EC2) / GCP / BigQuery - PostgreSQL / MongoDB / SQLite

PROJECTS

Healthcare Analytics & Intelligence Platform (HAIP)

Capstone | [Live](#)

End-to-end, six-service healthcare platform where a hospital uploads its data and receives validated analytics and KPIs, a user-trained **ML** model (**Random Forest**, leak-free pipeline), an admissions forecast with a staffing plan, a two-stage **RAG** chatbot (**FAISS** bi-encoder + cross-encoder re-ranker, **RAGAS** score 80+) over its own documents, and a **LangGraph** tool-calling agent. Built as containerised **microservices** behind an **nginx** reverse proxy with **JWT** auth and per-hospital isolation, and deployed to **AWS EC2** through a fully automated **CI/CD** pipeline (**GitHub Actions** -> **GHCR** -> **EC2**) on a live domain.
Python - FastAPI - Dash - Streamlit - scikit-learn - LangChain - LangGraph - FAISS - Sentence-Transformers - Gemini / Groq - Docker - nginx - GitHub Actions - AWS EC2

Hospital & Doctor Discovery Platform

Big Data Project | [GitHub](#)

A big-data application for finding better treatment: users select a city to see leading hospitals, drill into a department, and find top doctors, supported by a review and ratings system for hospitals and providers so patients can make informed choices.
Python - PySpark - Big Data - Ratings/Review System

Government Schemes Recommender

AI Project | [GitHub](#)

An application that helps students discover government schemes they are often unaware of. The user enters details such as class, age, and category, and the system retrieves the top three most relevant government schemes with direct links to the official portals.
Python - NLP - Recommendation - Streamlit

EDUCATION & TRAINING

Data Scientist Training

Aug 2024 - Present
Kochi, India

Brototype

- Trained intensively across the full **ML** lifecycle - **data engineering**, **statistics**, classical **ML**, **deep learning**, **NLP**, **big data (PySpark)**, and **LLM** application development - through hands-on, production-oriented projects.
- Built and shipped **production-grade AI** applications in **RAG**, **embeddings**, and vector databases - with reproducible pipelines, **RAGAS**-based evaluation, and **containerised deployment**.
- Led the design and deployment of a six-service healthcare platform end to end - from **data engineering** and modelling through to an automated **CI/CD** pipeline running on a live cloud server - demonstrating ownership and **cross-functional team leadership**.

Diploma in Computer Engineering

2021 - 2024

IPT and GPTC, Shoranur - State Board of Technical Education and Training, Kerala

CERTIFICATIONS & AWARDS

HackerRank SQL - Advanced Certification - Best Performer Award, Brototype (Project Week)

LANGUAGES

English - Malayalam - Tamil - Hindi
